

## A1 IMAGING OF DEERFIELD

1890 West Hillsboro Boulevard

Deerfield Beach, FL 33442

Phone: (954) 429-8381 Fax: (954) 429-2705

**Patient Name:** SUOMELA, DAVID

**Date of Birth:** [REDACTED]

**Patient ID:** [REDACTED]

**Age / Sex:** 41 / M

**Date of Exam:** 09/06/2019 4:50 PM EDT

**Referring Physician:** PERKINS, GENE

**Study:** RT.KNEE

**CLINICAL HISTORY:** Right knee pain.

**COMPARISON:** MRI right knee 07-10-2019.

**TECHNIQUE:** Multiplanar multi-sequential MR images of the right knee were performed. No intravenous contrast was administered.

### **FINDINGS:**

Thickening and abnormal signal is appreciated at the anterior cruciate ligament consistent with diffuse sprain or related to the previously mentioned intervention. However, no definite tear can be detected.

A small amount of joint effusion is noted.

Again noted is mild lateral displacement of the patella.

Internal linear abnormal signal is seen at posterior horn of medial meniscus that extends through outer, middle and inner one thirds and does not reach either articular surfaces consistent with subtle grade-II degenerative changes (image #86 series #5). Additionally, there is another subtle linear abnormal signal also seen at posterior horn and body of the lateral meniscus that does not reach either articular surfaces consistent with subtle grade-II degenerative changes (image #73 series #5).

Multilocular Baker cyst is seen related to medial head of gastrocnemius that measures 1.3 x 0.7 cm (image #11 series #2).

Normal posterior cruciate ligament is seen.

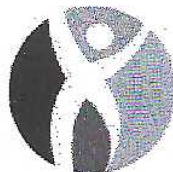

No recent fracture line can be detected.

The neurovascular bundle is intact.

### **IMPRESSION:**

Diffuse sprain of ACL.

A small amount of joint effusion.

**Study:** RT.KNEE

Subtle grade-II linear degenerative changes of posterior horn of medial and lateral menisci.  
Mild lateral displacement of the patella.  
Baker cyst related to medial head of gastrocnemius.  
No recent fracture line.  
The age of onset is chronic.
